

The CaDRi Partnership

Capacity for Disaster Reduction Initiative

Comprehensive and inclusive capacity development strategies to reduce climate and disaster risks across the sustainable development goals

1 Climate and disaster risk information systems

Technical advice to set up integrated, multi-hazard risk information systems to inform planning and investment

2 Risk informed development plans and programmes

Technical advice to integrate climate and disaster risk in development planning to achieve the SDGs

3 Preparedness for response and recovery

Technical advice to optimize national systems for preparedness for response and recovery

We promote

A New Way of Working between humanitarian and development actors by integrating data collection and analysis and building consensus around collective outcomes.

A holistic approach to working on the reduction of disaster and climate risks across sectors and levels.

An inclusive multi-stakeholder engagement process to address the needs and demands of the most vulnerable.

How we do it

Network of **90** Disaster Risk Reduction experts in **16** regional hubs

Deployment of multisectoral expertise from across CADRI Partners

Referral service to access funding and technical assistance

South-South and triangular cooperation

Specialized training to integrate risk reduction in the SDGs
